Hydrocarbon Index

Determination of the Hydrocarbon Index

The hydrocarbon index is defined as the total of all organic substances that can be extracted with hexane, but cannot be adsorbed in Florisil® (magnesium silicate). On a covalent GC column, these elute between *n*-decane and *n*-tetracontane and have a boiling range of 175–525 °C. These include heating oils, diesel fuels, kerosene, lubricants and transmission fluids. Petrols are not detected using this method.

Carl ROTH offers an extensive range of products for the determination of the hydrocarbon index in accordance with **EN ISO 9377-2-Mod. (DIN H53).**

Standards
According to **EN ISO 9377-2-Mod. (DIN H53)**

- Manufactured in accordance with **ISO 17034** in an accredited environment
- Tested in a laboratory accredited to **ISO/IEC 17025**
- Ideal for calibration of GC-FID, GC-TCD, GC-ECD, GC-MS, GC-MS/MS, LC-UV, LC-MS and LC-MS/MS
- With an detailed, batch-related certificate of analysis

by Hamilton

Standards for Conductivity Measurement

Hamilton conductivity standards are high-purity calibration solutions that ensure accurate and reliable verification of conductivity sensors. Offered in a diverse range of values, these standards are ideal for a multitude of applications across industries such as pharmaceutical, chemical, food and beverage, and environmental monitoring.
Hamilton is the first manufacturer to offer patented conductivity standards of 1.3 and 5 µS/cm with a certified accuracy of ±1% and a lifetime of 1 and 3 years respectively. They can be used repeatedly under the condition that the bottle is not left open for more than 1 hour in total.

NMR Solvents

-20 %

NMR Spectroscopy

Deuterated compounds are mainly used in NMR spectroscopy to characterise organic structures. This has the advantage of virtually eliminating solvent signals. In addition, acidic protons can be exchanged for deuterium to make it easier to assign the signals.

Application examples:

- Routine tasks such as structure determination and identity verification in research and development laboratories
- Elucidation of reaction mechanisms and metabolisms
- For GC-MS or LC-MS as internal standards

Properties:

- High degree of deuteration
- High purity of the starting compound
- Defined water content
- Filled under protective gas (nitrogen), except for compounds containing TMS

Salts in Technical Grade Quality

-20 %

ROTH offers a broad portfolio of high-quality technical salts for a wide range of applications in research, development, and technical processes. Whether used as starting materials for syntheses, in production processes, for technical experiments, or research projects, our products stand out through consistent quality, reliable specifications, and a wide range of packaging sizes.

With ROTH, you can rely on an experienced partner for technical chemicals and salts, dedicated to meeting your requirements competently and reliably.

ROTI®nanoMETIC

ROTH offers a broad portfolio of high-quality nanoparticles for a wide range of applications in research, development, and technical processes. Whether metallic nanoparticles, metal oxides, carbon-based nanomaterials, or other nanoscale compounds, our products stand out through their high quality, well-defined properties, and extensive selection of materials.

Most nanoparticles are supplied as hydrophilic powders and can be easily dispersed in aqueous media.

With nanoparticles from ROTH, you can rely on a trusted partner for innovative nanomaterials and forward-looking applications.

Silica gels with a Moisture Indicator

Indicator silica gels provide reliable protection for moisture-sensitive goods during transport and storage. They efficiently adsorb water vapor from the environment and indicate saturation via a clear color change. Suitable for drying gases, solids, and enclosed systems.

Shaker Orbital digital

Heathrow Scientific.

- Circular movement
- Plates, petri dishes, glass flasks and culture bottles can be secured flexibly using elastic bands
- Digital display of speed and operating time
- Electronic speed control with soft start-up
- Loading options: e.g. 9 x 250 ml Erlenmeyer flasks or 4 x 500 ml Erlenmeyer flasks or 4 x 1000 ml Erlenmeyer flasks or 16 x 250 ml beakers or 4 x 1000 ml beakers
- 5 years warranty

Technical specifications:

Art. No.	PY67.1
Type	Digital orbital shaker
Movement type	circular
Speed range	20 to 300 rpm
Shaking amplitude (stroke)	19 mm
